

BLACK AND COLOURED

FLEECE COMPETITION

weight charts for the allocation of points for clean fleece weight

HOW TO USE THE CHARTS

1. The fleeces must be weighed to the nearest .2kg to obtain their greasy weight.
2. On Chart 1, correlate the greasy weight of the fleece under consideration with the judge's assessed yield. This will give you the clean weight of the fleece in kilos to one decimal point.
3. On Chart 2, correlate the clean fleece weight with the judge's assessed fineness grade for the appropriate class: - shorn hogget, woolly hogget, or ewe. Read off and record the points on the face of the score card.

Example: We have a shorn hogget fleece weight 3.2kg greasy. The judge has assessed it as 76% yield.

1. On chart 1, we find that 3.2kg at 76% gives 2.4kg clean fleece weight. Remember '2.4'.
2. On the shorn hogget section of chart 2, we move down the 48s column until we intersect with the 2.4kg row of figures. Here we find '22' and this is the figure to be entered as the clean weight points for that fleece.

CHART 1; CONVERSION. GREASY TO CLEAN FLEECE WEIGHT

GREASY WEIGHTS, Kg
